Chapter - 6 Geography

Natural Vegetation and Wildlife

- Natural vegetation is the plant life of a region.
- Natural vegetation is of three types: forest, grasslands and shrubs.
- The changes in the type of natural vegetation mainly occurs because of the changes of the climate region.

• Forests:

- (i) Forests are of six types: Tropical Evergreen, Tropical Deciduous, Temperate Evergreen, Temperate Decidous, Mediterranean, Vegetation, and Coniferous forests.
- (ii) Tropical Evergreen Forests are those which occur in the region near the equator and close to the tropics.
- (iii) Tropical Decidous Forests are monsoon forests which shed their leaves in the dry season to conserve water.
- (iv) Temperate Evergreen Forests are located in mid-latitudinal coastal region.
- (v) Temperate Deciduous Forests are those which shed therir leaves in the dry season.
- (vi) Meditteranean Vegetation is found around Mediterranean Sea in Europe.
- (vii) Confirous Forests are found in areas along the Taiga.

Grasslands:

- (i) Tropical grasslands occurs on either side of the equator and extend till the tropics.
- (ii) Temperate grasslands are found in mid-latitudinal zones and in the interior part of the continents.

• Thorny Bushes:

- (i) Thorny bushes are found in the dry desert like regions.
- (ii) These are found in areas with scanty rain and scorching heat.

• Tundra Vegetation:

- (i) Tundra vegetation growth of natural vegetation is very limited here.
- (ii) It is found in polar areas.
